

TRAINING

Achieving performance objectives through a well-trained workforce.

Organisations rely on people for its safety, productivity and profitability. One of the major concerns currently in industry is the lack of competencies in the technical field. This is caused by experienced personnel retiring, the reduction of personnel due to economic pressures, large numbers of newly appointed people and changes in processes and technologies.

Training programmes help to educate employees and supply chain partners, ensuring that people are properly qualified and competent to perform their work and understand the compliance requirements. Training can be carried out to deliver short-term requirements, such as behavioural improvement, for re-skilling of re-deployed individuals, or it can be part of an on-going programme.

Bureau Veritas offers a comprehensive portfolio of training services covering a wide range of compliance and business improvement issues. The following continuous professional development accredited courses are currently available:

- Maintenance planning and scheduling;
- Turnaround and shutdown management;
- Management of change;
- Asset management in the manufacturing and processing industries;
- Understanding and applying plant maintenance principles; and
- Developing asset maintenance plans.

The delivery of training can be at the client's premises, Bureau Veritas offices, or at regional centres and the training material can be adopted or courses can be added according to the specific needs of the client.

Key benefits

- Increased productivity and quality of work;
- Increased understanding of new technologies, tools and techniques;
- Enhanced morale and changed attitudes, due to the organisation's investment in personnel; and
- Part of the continuous development of professionally registered persons.
