

COMPLIANCE AUDITS

Ensuring compliance to regulatory requirements.

In many organisations, managers are not aware of their noncompliance to legislative and regulative requirements associated with asset management, which could result in penalties to individuals and to the organisation. Bureau Veritas follows a structured approach when performing these audits and includes:

- Understanding the legislative and regulative requirements applicable to the organisation;
- Reviewing the current practices against legislative and regulative requirements;
- Identifying gaps and areas for improvement;
- Conducting a risk assessment to assess where the major operational and legal risks lie; and
- Developing an action plan with the client to reduce risk.

Audits are not limited to regulatory compliance only and Bureau Veritas can also conduct audits on asset integrity management and maintenance management systems by applying the requirements of the client as well as good industry practices. This will assist the client to ensure compliance to their own governance and identify improvement areas.

Key benefits

- Understanding the areas of noncompliance and the associated risks;
- Receiving an objective evaluation of noncompliance;
- Obtaining an improvement action plan to address noncompliance issues.
